OSHA STANDARDS FOR THE CONSTRUCTION INDUSTRY CODES OF FEDERAL REGULATION

Each of the "What Every Supervisor Must Know" references have been field-tested with agencies seeking a simple, no-nonsense approach to OSHA compliance

This single desktop reference provides the full text of OSHA construction industry standards (29 CFR 1926), PLUS cross-referenced general industry standards (29 CFR 1910) wherever applicable, with up-to-date coverage of the complete standards and all amendments through January 2008. For your convenience, the complete text of each general industry section/appendix immediately follows each cross-reference. Also includes:

- §1903 regulations on inspections, citations, and proposed penalties;
- Revised §1904 regulations covering recording and reporting of occupational injuries and illnesses;
- §5(a) of the Occupational Safety and Health Act of 1970 (the "General Duty" clause);
- §1990 carcinogen policy and model standards; and
- §1926.750 Steel Erection Standard (based on final rule 66 CFR 5196).

Excerpts from §1990: Throughout the construction standards, there are cross-references to corresponding sections of Part 1910 - the general industry standards. For your convenience, the editors of this book have inserted the complete text of each general industry section/appendix immediately following each cross-reference. All incorporated general industry sections have a green background to differentiate them from the construction industry text. A finding table for all Part 1910 excerpts follows the Table of Contents.

Recent Amendments:

Respiratory Protection Standard additions. OSHA has added a quantitative fit testing methodology known as a controlled negative pressure REDON fit testing protocol to Appendix A of the Respiratory Protection Standard, 29 CFR 1910.134. The change affects respiratory protective standards for general industry and construction. The protocol requires three different test exercises to be performed after which the test subject redons the respirator two times. Some editorial and minor technical changes are also included. The changes are effective September 3, 2004.

Sarbanes-Oxley Employee Protections. A new rule published at 29 CFR 1980 contains procedures for handling discrimination complaints made to OSHA, as governed by the whistleblower employee protections of Sec. 806 of the Corporate and Criminal Fraud Accountability Act of 2002 also known as Sarbanes-Oxley. The new rules apply to employment in construction and general industry. Section 806 and the rules implementing it protect employees who provide information to the employer, a federal agency or Congress about violations of federal law relating to fraud against shareholders from retaliation by those companies with registered securities or required to file reports with the

Securities and Exchange Commission and by an officer, employee, contractor, subcontractor or agent of those companies. The text appears in the Appendices at the end of the book.

Technical revisions. OSHA published nonsubstantive technical revisions to rules that contained cross references to portions of regulations that had been eliminated or renumbered. The technical amendments are reflected in this edition.

Standards Improvement Project. OSHA has completed Phase II of its Standards Improvement Project, an initiative designed to remove and revise outdated, duplicative, unnecessary or inconsistent language in its standards.

Benefits and Features:

As part of the CCH® ongoing effort to improve the quality of our products, this book has been redesigned. In response to customer requests, the editors have chosen a new format to improve readability and overall appearance. Significant changes from previous editions include:

- OSHA Interpretation Letters in the Appendix
- The larger 8-1/2" x 11", 2 column format improves readability and overall appearance, and has enlarged and enhanced graphics and charts
- New color scheme highlights important material, and clearly differentiates general industry text from construction industry text
- A finding table for all Part 1910 excerpts follows the Table of Contents
- Gray bars denote amended text
- Section tabs throughout the book help you locate information quickly
- Full citation lines in color are in each section for easy reference
- Charts and tables organize information logically
- Illustrations clarify understanding, and are separated from text by a color border
- The reformatted index now includes page numbers
